AMENDMENT UNDER 37 C.F.R. 1.116 - EXPEDITED PROCEDURE

Serial Number: 10/674,960

Filing Date: September 30, 2003

Title: METHODS FOR LASER SCRIBING WAFERS

Assignee: Intel Corporation

IN THE CLAIMS

Page 2

Dkt: 884.949US1 (INTEL)

Please amend the claims as follows.

1. - 15. (Canceled)

16. (Original) A method for laser scribing a wafer comprising:

laser scribing a first continuous line;

laser scribing a second continuous line spaced apart from the first continuous line; and laser scribing a third continuous line, the third continuous line positioned between the first continuous line and the second continuous line.

- 17. (Original) The method for laser scribing a wafer of claim 16 wherein the first continuous line, the second continuous line and the third continuous line overlap.
- 18. (Original) The method for laser scribing a wafer of claim 16 wherein the third continuous line overlaps the second continuous line and the third continuous line.
- 19. (Original) The method for laser scribing a wafer of claim 16 wherein the first continuous line, the second continuous line and the third continuous line are formed from overlapping pulses from a laser.
- 20. (Original) The method for laser scribing a wafer of claim 16 wherein the first continuous line, the second continuous line and the third continuous line overlap are in an area having a width greater than the width of a saw blade.
- 21. (Original) The method for laser scribing a wafer of claim 16 wherein the first continuous line, the second continuous line and the third continuous line overlap are in an area having a width greater than the width of a kerf from a saw blade.

Title: METHODS FOR LASER SCRIBING WAFERS

Assignee: Intel Corporation

22. (Canceled)

23. (Original) A method for singulating dies from a wafer comprising:

laser scribing a first continuous line;

laser scribing a second continuous line spaced apart from the first continuous line;

laser scribing a third continuous line, the third continuous line positioned between the first

continuous line and the second continuous line; and

passing a saw through the area of the first continuous line, the second continues line and the third

continuous line to cut the wafer.

24. (Original) The method for singulating dies from a wafer of claim 24 wherein the first

continuous line, the second continuous line and the third continuous line overlap.

25. (Original) The method for singulating dies from a wafer of claim 24 wherein the third

continuous line overlaps the second continuous line and the third continuous line.

26. (Original) The method for singulating dies from a wafer of claim 24 wherein the first

continuous line, the second continuous line and the third continuous line are formed from

overlapping pulses from a laser.

27. (Original) The method for singulating dies from a wafer of claim 24 wherein the first

continuous line, the second continuous line and the third continuous line overlap are in an area

having a width greater than the width of a kerf from a saw blade.

28. (Canceled)

29. (Original) An apparatus comprising:

a laser adapted to direct laser energy toward a wafer;

a saw

Serial Number: 10/674,960

Filing Date: September 30, 2003

Title: METHODS FOR LASER SCRIBING WAFERS

Assignee: Intel Corporation

a microprocessor for controlling the direction of the laser energy and controlling the

movement of the saw;

a memory operatively coupled to the microprocessor; said memory including an

instruction set to cause a suitably programmed apparatus to

laser scribe a first continuous line on a wafer; and

laser scribe an area near the first continuous line but not contacting the first continuous

line.

30. (Original) The apparatus of claim 29 wherein the laser scribe of the area near the first area

includes laser scribing a second line near the first line and further comprising laser scribing a

third line overlapping the first continuous line and the second line.

31. (Original) The apparatus of claim 29 wherein the laser scribe of the area near the first area

includes producing a plurality of spaced laser ablations in the area adjacent the first continuous

line.

32. (Previously Presented) A method for laser scribing a wafer comprising:

laser treating a first area of the wafer;

laser treating a second area adjacent the first area; and

laser scribing a third continuous line, the third continuous line positioned between the first area

and the second area.

33. (Previously Presented) The method for laser scribing a wafer of claim 32 wherein at least a

portion of the first area, a portion of the second area and a portion of the third continuous line

overlap.

34. (Previously Presented) The method for laser scribing a wafer of claim 32 wherein the third

continuous line overlaps the second area and the third area.

AMENDMENT UNDER 37 C.F.R. 1.116 - EXPEDITED PROCEDURE

Serial Number: 10/674,960 Filing Date: September 30, 2003

Title: METHODS FOR LASER SCRIBING WAFERS

Assignee: Intel Corporation

35. (Previously Presented) The method for laser scribing a wafer of claim 32 wherein the first

area, the second area and the third continuous line are formed from overlapping pulses from a

laser.

36. (Previously Presented) The method for laser scribing a wafer of claim 32 wherein the first

area, the second area and the third continuous line overlap are in an area having a width greater

than the width of a saw blade.

37. (Previously Presented) The method for laser scribing a wafer of claim 32 wherein the first

area, the second area and the third continuous line overlap are in an area having a width greater

than the width of a kerf from a saw blade.

38. (Previously Presented) The method for laser scribing a wafer of claim 32 wherein the first

area, the second area and the third continuous line overlap are in an area having a width greater

than the width of a kerf produced by a saw blade.
